About VoiceSignal

VoiceSignal has been developing state-of-the-art small footprint, highly accurate, speech solutions for consumer products and mobile devices since 1995.

VoiceSignal solutions are designed to address the ease-of-use problem that increasingly confronts mobile device users, as these devices get smaller and more sophisticated. VoiceSignal solutions eliminate the need for 5-10 button pushes to access a phone's features. With a VoiceSignal solution users can make a single command (e.g. "call Bill Smith at the office", "last number dialed", "open camera") to access any feature on a phone or any service offered by the operator, making mobile phones easier, safer and more fun to use.

The VoiceSignal solutions run on popular hardware and software platforms. VoiceSignal applications are precompiled and pre-tested, which makes them easy to integrate onto a manufacturer's phone and helps to reduce the critical "time to market" problem.

We license our software products to leading wireless device manufacturers and our solutions are available on products that they are shipping in North America, South America, Europe and Asia.
